

MINUTES OF THE MEETING

Project: Team Merge Conflict — WAH4PCE Project

Meeting Purpose: SCRUM Meeting 1 (Sprint 2 Standup & Sprint Tracker Review)

Date: September 18, 2026

Time: 10:14 PM PST

Platform: Microsoft Teams

Facilitator: Marwin John Gonzales

Attendees:

- **Present:**
 - Marwin John Gonzales
 - Rick Francis Cruz
 - Vince Nelmar Alobin
- **Absent / Asynchronous:**
 - Qelvin Joszeler Nagales (*submitted activity diagrams and updates via Microsoft Teams chat*)

1. Meeting Agenda

- Review and updating of the Sprint 2 Tracker, story points, and impediments log in Excel.
- Alignment on C4 diagram structure (Level 1 Context, Level 2 Container, and Level 3 Component) and complexity tiers.
- Review of Use Case Full Descriptions (UCFD) for Admin and Data Ingestion workflows.
- Cross-referencing UCFD steps with Qelvin Joszeler Nagales' activity diagrams.
- Database schema verification and Entity Relationship Diagram (ERD) planning.

2. Sprint 2 Tracker & Impediments Review

Impediments Log

- Non-project commitments and extracurricular academic events were logged as primary team impediments impacting sprint velocity.

Sprint Backlog Status

- **C4 Diagrams (Assigned to Marwin John Gonzales):**
 - Completed initial passes for Context and Container diagrams (Day 10 milestone); pending adjustments for naming and complexity.
- **Use Case Full Descriptions (Assigned to Rick Francis Cruz):**

- Completed initial drafts for core use cases; currently under revision to align with exact system terminology and UI behavior.
- **Activity Diagrams (Assigned to Qelvin Joszeler Nagales):**
 - Core pipeline activity diagrams completed and submitted to the team via Teams chat.
- **Entity Relationship Diagram / ERD (Assigned to Rick Francis Cruz):**
 - In progress; pending addition of authentication/login tables based on Vince Nelmar Alabin's database schema.

3. Key Discussion Points & Strategic Decisions

C4 Diagram Architecture & Decomposition (Low vs. High Complexity)

- **Required Diagram Count:**
 - To satisfy adviser specifications regarding system depth, the team confirmed that 5 C4 diagrams will be prepared in total:
 - 1 System Context Diagram (Level 1)
 - 2 Container Diagrams (Level 2 — Low Complexity and High Complexity)
 - 2 Component Diagrams (Level 3 — Low Complexity and High Complexity)
- **Terminology Alignment:**
 - Vince highlighted that component and container box labels (e.g., FHIR R4 Ingestion API, HL7 v2 Ingestion API) must strictly mirror the terminology used in the Use Case Diagrams and Use Case Full Descriptions rather than using generic names like Request API.
- **Granular Scope:**
 - Marwin reviewed the granular use case diagram and noted it must focus strictly on the ADAPT iPaaS interoperability boundary rather than sprawling across external boundaries.

Use Case Full Descriptions (UCFD) Review

- **Administer System (UC 1):**
 - Rick presented the UCFD table covering the administrative login flow, credential validation, and exception handling.
 - **Multi-Factor Authentication (MFA):** The team discussed whether MFA should be mandatory or marked as "if applicable." Marwin clarified that

since client (WAH) authentication infrastructure is not yet finalized, keeping MFA as conditional / "if applicable" is the appropriate approach.

- **Dashboard UI Specificity:** Vince advised Rick to make the post-login steps specific to the actual Next.js interface being developed, explicitly documenting navigation across the three core dashboard tabs: **System Health, Transaction Logs, and Data Mapper.**
- **Data Processing & Pipeline Use Cases:**
 - Reviewed UCFDs for:
 - *Provide Health Data*
 - *Validate Schema & Completeness*
 - *Translate Data to/from FHIR R4 / HL7 v2*
 - *Validate Privacy Consent*
 - *Request FHIR Health Data*
 - *Manage Health Data*

Alignment Between UCFD and Activity Diagrams

- Rick observed that Qelvin's activity diagram focused directly on core ingestion/orchestration and did not depict the admin login steps.
- Marwin instructed Rick to coordinate directly with Qelvin so that the textual steps in the UCFD and the sequential swimlanes in the Activity Diagrams match 1:1 without discrepancies.

Database Schema & ERD

- Rick clarified whether a full SQL schema or an ERD was required.
- Vince confirmed that database schema details had already been shared and will be referenced to complete the ERD structure, specifically incorporating the tables for user access and transaction logs.

4. Action Items

Action Item	Person Responsible	Target Date
Update C4 container and component diagrams to include Low and High complexity versions	Marwin John Gonzales	Sprint 2

Synchronize box labels across C4 diagrams with UCFD terminology	Marwin John Gonzales	Sprint 2
Refine UCFD steps for "Administer System" to reflect the 3 dashboard tabs	Rick Francis Cruz	Tomorrow
Cross-check UCFD flows with Qelvin Joszeler Nagales' activity diagrams for 1:1 parity	Rick Francis Cruz & Qelvin Joszeler Nagales	Sprint 2
Finalize ERD by incorporating the authentication/login and transaction entities	Rick Francis Cruz	Sprint 2
Continue prototype development for the 3 core Admin dashboard views	Vince Nelmar Alobin	Ongoing

5. Photo Documentation

The screenshot displays a video conference session with two participants, Rick Francis Cruz and Marwin John Gonzales, working on diagrams. The left participant is using a web-based diagram tool to create a Granular Use Case Diagram for 'WAHAPCE INTEROPERABILITY'. The right participant is using a whiteboard to present the 'final version msyadd (presented in midterms)'. The whiteboard diagram shows a flow from 'Request Health Data' to 'Provide Health Data' and then to 'Validate Health Data'. The video conference interface includes a top bar with participant names and a bottom bar with a chat window.
