

MINUTES OF THE MEETING

Project: Team Merge Conflict — WAH4PCE Project

Meeting Purpose: SCRUM Meeting 2 (Sprint 2 Standup & Diagram Review)

Date: September 19, 2026

Time: 10:26 PM PST

Platform: Microsoft Teams

Facilitator: Marwin John Gonzales

Attendees:

- **Present:**
 - Marwin John Gonzales
 - Rick Francis Cruz
 - Qelvin Joszeler Nagales
- **Absent:**
 - Vince Nelmar Alobin

1. Meeting Agenda

- Walkthrough of revised C4 diagrams (Level 1 Context, Level 2 Container, Level 3 Component) and Granular Use Case Diagram.
- Review of the Interoperability Pipeline Activity Diagram and Sprint Tracker status.
- Review of revised Use Case Full Descriptions (UCFD), User Stories spreadsheet, and ERD entities.
- Synchronization between UCFD textual steps and Activity Diagram decision flows.
- Clarification regarding reference section formatting and upcoming adviser consultations.

2. Member Status Reports

Marwin John Gonzales (C4 Diagrams & Granular UCD)

- **Accomplishments:**
 - Revised the C4 model set in draw.io to align terminology strictly with the midterms Use Case Diagram (UCD).
 - Structured the diagrams into distinct granularity tiers:

- **System Context Diagram (Level 1):** Defines the overall boundaries between WAH Hospital Systems, ADAPT iPaaS, DOH IHOMIS, and Administrators.
- **Container Diagrams (Level 2):** Split into a **High-Level** architectural overview and a **Low-Level** granular runtime container view detailing internal communication lines.
- **Component Diagrams (Level 3):** Split into a **High-Level** component model and a **Low-Level** core subsystem model focusing internally on the ADAPT processing engine.
- **Granular Use Case Diagram:** Narrowed scope directly to the ADAPT system boundary, mapping explicit extends/includes relationships for schema validation, syntactic fallback, incomplete record quarantining, consent verification, and audit logging.
- **Next Steps:** Present revised diagrams to project adviser Gil Balleca and Sir Sean for validation, then export to a shared whiteboard canvas for collaborative editing.

Qelvin Joszeler Nagales (Activity Diagrams & Sprint Tracker)

- **Accomplishments:**
 - Drafted the initial PlantUML activity diagram: *WAH4PCE Interoperability Pipeline (Reflecting Validation Architecture, Consent Gatekeeper, and ADAPT Engine Decision Tree)*.
 - Modeled key decision points: Ingesting Raw Data $\rightarrow$ Schema Validation (quarantine and alert admin if malformed) $\rightarrow$ Privacy Consent Check (purge payload and log security violation if missing/expired) $\rightarrow$ ADAPT Engine (Primary AI semantic translation vs. Fallback syntactic mapping) $\rightarrow$ Target Destination Delivery $\rightarrow$ Audit Trail Logging.
 - Completed the Sprint Comment Matrix sheet.
- **Sprint Backlog:**
 - Align activity diagram swimlanes with Rick Francis Cruz's final UCFD flows.
 - Draft the Reference Section in the documentation once formatting requirements are confirmed.
 - Update individual test case descriptions in the tracker.

- **Blockers:** Schedule delays and multitasking due to external academic/organization commitments, including NAMFREL activities and the *Likhani* project.

Rick Francis Cruz (Use Case Full Descriptions, User Stories, & ERD)

- **Accomplishments:**
 - Updated the Word documentation (BACK-UP - Use Case Full Description) for core use cases, standardizing the format to cleanly separate Actor actions and System responses:
 - **Administer System:** Refined the login workflow, noting that Multi-Factor Authentication (MFA) remains conditional ("if applicable"). Explicitly detailed post-authentication navigation across the **Dashboard**, **Transaction Logs**, and **Data Mapper** modules.
 - **Data Pipeline Use Cases:** Updated descriptions for *Provide Health Data*, *Validate Schema & Completeness*, *Translate Data*, *Validate Privacy Consent*, *Request FHIR Health Data*, and *Manage Health Data*.
 - Streamlined the Excel User Stories tracker by removing extraneous backlog items not present in the base Use Case Diagram.
 - Updated ERD planning: Added an administrative authentication entity (`login_credentials`) containing username, password hash, name fields, and access role properties.
- **Sprint Backlog:** Coordinate with Qelvin Joszeler Nagales to verify that all UCFD action-response pairs match the activity diagram steps.
- **Blockers:** Academic workload and reflection paper deadlines.

3. Key Discussion Points & Strategic Alignment

- **UCFD to Activity Diagram Parity:**
 - Qelvin noted that his pipeline activity diagram focused directly on ingestion/processing and lacked admin authentication steps.
 - The team agreed that every step defined under the UCFD *Flow of Activities* must correspond directly to nodes in the Activity Diagrams to prevent discrepancies during panel defense.

- **Reference Section Formatting:**
 - Qelvin raised a question regarding the required structure for the Reference Section in the Sprint Tracker and documentation.
 - The team decided to seek clarification from Sir Sean on whether references must follow formal APA 7th edition formatting in the paper or a tabular format within the Excel sheets.
- **Impediment Logging:**
 - The group logged external academic deliverables (e.g., NAMFREL volunteering, SOMA *Likhani* project deliverables) into the Sprint Impediments tab, recognizing their impact on sprint velocity.

4. Action Items

Action Item	Person Responsible	Target Date
Transfer C4 diagrams to Canva Whiteboard for collaborative adjustment	Marwin John Gonzales	Next Meeting
Validate C4 Low/High complexity diagrams with adviser Gil Ballesca and Sir Sean	Marwin John Gonzales	Next Consultation
Send finalized UCFD document to Qelvin Joszeler Nagales via Microsoft Teams	Rick Francis Cruz	Immediate
Revise Interoperability Pipeline Activity Diagram to align 1:1 with UCFD steps	Qelvin Joszeler Nagales	Tomorrow

Clarify Reference Section format requirements (APA 7 vs. Table) with Sir Sean	Marwin John Gonzales	Next Sync
Finalize database schema and ERD login table attributes	Rick Francis Cruz	Sprint 2

5. Photo Documentation

Use case name:	Administer System	
Scenario:	The system administrator accesses the IPaaS management console to configure API endpoints, manage tenant credentials, monitor integration health, and review audit logs.	
Triggering event:	The WAH4PCE Admin navigates to the IPaaS administrative portal to log in.	
Brief description:	This use case governs the administrative orchestration of the platform, enabling the admin to ensure network uptime, manage security policies, configure routing rules, and oversee system health. It includes the mandatory secure login process.	
Actors:	WAH4PCE Admin	
Related use cases:	None	
Stakeholders:	WAH4PCE Admin: Requires secure, comprehensive access to platform settings and telemetry. All Tenants/Users: Rely on the admin to maintain high availability and secure data transit.	
Preconditions:	The WAH4PCE Admin must have provisioned administrative credentials in the identity provider.	
Postconditions:	The Admin is authenticated, and platform configurations are successfully updated, deployed to the gateway, and logged in the immutable audit trail.	
Flow of activities	Actor	System
	1. Navigates to the IPaaS login portal and submits their administrative credentials (username, password, and MFA token if applicable). 2. Selects a management module (Dashboard, Transaction Logs, Data Mapper) and inputs configuration changes.	1.1 Authenticates the credentials against the secure identity provider and generates an access token. 1.2 Provisions the administrative dashboard for the WAH4PCE Admin. 2.1 Commits the changes, updates the routing state, and logs the administrative activity.
Exception conditions:	1.1 Invalid Credentials: If the Admin provides incorrect login details or fails MFA, the system denies access, blocks the login attempt, and logs a security exception.
